

The Water Resources Development Act (WRDA) authorizes Army Corps of Engineers projects for navigation, flood control, hurricane and storm damage reduction and other infrastructure projects that are feasible and justified on the basis of national benefits. This legislation is typically addressed every two years, with the last WRDA being passed in 2007. Our Congressional District remains one of the most flood prone in the nation. As such, the WRDA is an important opportunity to authorize the federal government to work with state and local partners in developing and improving our levees and other flood control infrastructure. Flood control in the North State continues to be one of my top priorities here in Congress, and I look forward to continuing to work to ensure that the federal government does its part, within a responsible federal budget, to support state and local efforts to protect homes and businesses from the threat of flooding.
